

Risk Management Committee

Risk management is an integral part of the work of investment professionals in the Netherlands. The ambition of the CFA Society Netherlands Risk Management Committee is to make a relevant contribution in the broad field of risk management for investment professionals in the Dutch financial sector.

The committee meets several times a year for coordination and to discuss various topics in the broad field of risk management. Within the committee, each member has his/her responsibilities for substantive and/or operational matters.

An important objective of the Committee is to disseminate its knowledge. The committee does this on the one hand by organizing round tables and/or seminars on current risk management topics, and on the other hand by being closely involved with the Risk Management for Financial Institutions and Investment Management courses and through a close partnership with the Actuariële Genootschap (AG).

Every first Thursday of October, the committee organizes a conference.

The CFA Society Netherlands Risk Management Committee is always looking for enthusiastic and driven risk managers to contribute.
